BCG Introduces New DLAN Editions & Industry Packs

BUFFALO, NY – *June 6, 2017* – We are excited to announce the release of our new DLAN Editions & Industry Packs! We recently repackaged our current offerings into 3 new editions and created industry specific packs, each of which includes modules tailored for emergency management, healthcare, and transportation. By bundling some of our most popular features into new editions and industry packs, we are able to offer them at significantly reduced prices while simplifying the purchasing process.

The new DLAN editions are Basic, Advanced, and Premium; each have been designed to give your team exactly the features they need to manage daily operations, events, and emergencies.

DLAN Basic is our simplified, streamlined incident management solution. Many of the features are pre-configured to make it easy to get started with this very economical solution.

DLAN Advanced allows organizations to perform a wider range of incident management and normal operations functions. It includes powerful tools for contact, resource, and document management, as well as our Mobile Responder App.

When it comes to Incident Management Systems, DLAN Premium is truly in a class of its own. It features a robust set of fully customizable tools as well as specific tools tailored to the needs of the emergency management, healthcare, and transportation industries.

DLAN Premium comes with the choice of one of our new industry packs: Emergency Management, Healthcare, or Transportation. All packs include DLAN's Mobile Responder App so that all industry specific tools can be utilized by field staff, regardless of connectivity.

The Emergency Management pack comes with a robust set of modules designed specifically for emergency managers including our ICS Form, Incident Action Plan, and Situation Report modules. It also includes tailored forms, reports, and status boards for Damage Assessment, Shelter Management, and Road Closures.

The Healthcare Pack is specifically designed to give hospitals the tools they need to gain overall situational awareness and manage emergency responses. It includes HICS Forms, Bed Tracking, and a tailored form, report, and board for patient tracking.

DLAN's Transportation Pack has been modeled around how our current transportation customers utilize the software. It includes GIS Premium, our robust mapping system, as well as tailored forms, reports, and status boards for Road Closures, Maintenance, and Damage Assessment.

Our new Editions and Industry Packs make it easier for DLAN to meet the specific needs of various organizations and industries. As BCG's customer base continues to grow we hope to add additional industry packs to our current offerings and continue to offer our customers a product that balances the convenience and affordability of a COTS system with the capabilities of a customized solution tailored to their specific workflow.
