

250th Anniversary Celebrations

Be ready before the gates open & stay coordinated through every phase.

250th celebrations such as parades, air shows, concerts, fireworks, naval reviews, and other mass gatherings will bring together unprecedentedly large crowds of people to multiple venues creating soft targets and straining emergency personnel like never before.

Threat Assessment Management

DLAN facilitates the identification of threats and vulnerabilities such as cyberattacks, through risk assessments. Organizations can analyze their systems, networks, and data to understand potential weak points, and then develop comprehensive incident response plans. Once an attack is detected, DLAN is used to immediately alert stakeholders, operationalizing the response process swiftly.

Linking Multiple Venue Sites Together

Our DLAN Incident Management System (IMS) has been deployed internationally to facilitate the management of multiple venues, sites, agencies, and resources.

- Parade Routes
- Airfields
- Stadiums
- Naval Ports
- Public Parks
- Universities

Real-Time Situational Awareness

Centralize, visualize, and track both incident reports and the status of each mission, as well as allocate resources. This ensures that critical tasks and any potential issues are prioritized and resolved in a timely manner and can be shared across multiple venues and operations centers.

DLAN enables swift and coordinated emergency response efforts, allowing authorities to mobilize resources and return to planned event operations.

Invest in a system that has your event security in mind every day.

Threat Assessment Management (TAM)

DLAN facilitates the identification of threats and vulnerabilities such as cyberattacks, through risk assessments. Organizations can analyze their systems, networks, and data to understand potential weak points, and then develop comprehensive incident response plans. Once an attack is detected, DLAN is used to immediately alert stakeholders, operationalizing the response process swiftly.

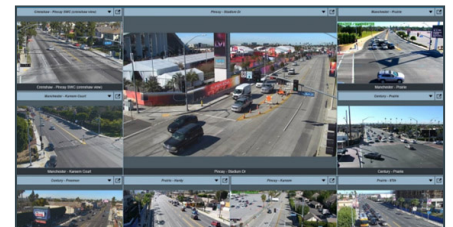

Embedded Personnel/Partnership

BCG can either lead or support your planning, operations, and/or recovery efforts. Our expertise and ability to configure the IMS system for event workflows, allows us to integrate multiple agencies and operation centers. You can ensure your team is well-educated on the features and tools of DLAN through pre-event coordination. Our IMS/ICS Certified Team members are your partners every step of the way: from onboarding, to daily coordination meetings in the weeks before and through the duration of the event

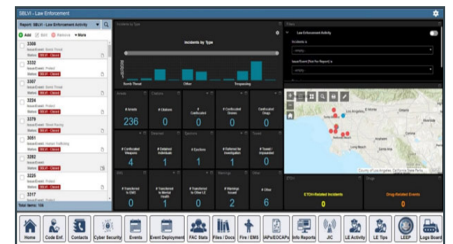

Joint Information Center/Communications Team

Public information messaging and communication that is timely, vetted, and accurate is key to the success of any event. DLAN workflows help PIOs conduct rumor control activities, and disseminate information quickly across multiple channels, spanning from crisis communication to media relations.

Data Visualization & Streaming Video

Data visualization is critical to identifying real-time location of resources, crowd management, at-risk sectors, hot spots, hazards to responding units, and analyzing evacuation routes. View drone feeds and/or video feeds from command posts and field units for detection, surveillance, and situational awareness utilizing DLAN's drag-and-drop dashboards.

Documentation and Resource Management

Incident Action Plans and Situation Reports are crucial to executing a large-scale events successfully. Utilize ICS/IMS forms or customized forms, reports, and dashboards to manage inventory and resource requests. DLAN's Mobile Responder app allows users to collect, receive, and send data from the field. Mobile Responder can track breadcrumb trails and last known locations of mobile devices in the field, even in areas without connectivity. Admins can manage specific resource requests, relay information to other departments, and track the status of any process.
